Wood Product SIGNS

ABOUT US

Wood Product Signs is your one stop sign shop that has been an approved vendor for the Forest Service since 1986!

We offer computer routed signs (HDPE Plastic, Western Red Cedar, Oak, Sign Foam & MDO Plywood), Reflective HDO Plywood and Aluminum signs, along with everything you need to complete your sign project.

While our customer base continues to grow, we are still a small, family-owned business. We are located in the beautiful Rocky Mountains of Colorado.

All U. S. Forest Service Signs we manufacture are in strict compliance with the EM 7100-15 current specifications.

Custom signs are also available. If there is something that you cannot find in our catalog, please do not hesitate to contact us. Custom sign orders are welcome.

48" x 24"	Call for pricing
60" x 36"	
72" x 48"	

FOREST ROAD DESTINATION SIGNS (FRDs)

- We offer FRD signs made out of High Intensity Prismatic Reflective Sheeting on Aluminum or HDO Plywood backing.
- The size of the sign is determined by the length of the message and size of the lettering.
- Prices are calculated based on square footage once the sign size is determined.

TEXT SIZE EXAMPLES

Examples of how the sign size will change depending on the letter size.

Ordering is easy!

- Determine the road type and speed for letter size. You may want to measure the text on existing signs in your area to get a better idea of the size you need.
- Send us your sign message, letter size, and material (HDO Plywood or Aluminum).
- We will send you a quote with approximate sign sizes. USFS specs call for upper and lowercase lettering. We will follow those specs unless otherwise instructed.
- Once the order is placed we will send you layouts of each sign.

Table 3C-1—Legend and symbol size for guide signs on NFS roads

Speed (mph)	Upper Case Letters and Numbers* Minimum Size (inches)		Symbols Minimum Size (inches)	
	Conventional Roads	Low-Volume Roads	Conventional Roads	Low-Volume Roads
50 and over	6	6	24	24
30-45	6	5	24	24
20-25	6	4	24	18
15 and under	6	3	24	12

*The size of lower case letters are ¾ the height of the upper case letters.

ADDITIONAL OPTIONS/ADD-ONS FOR FRD SIGNS

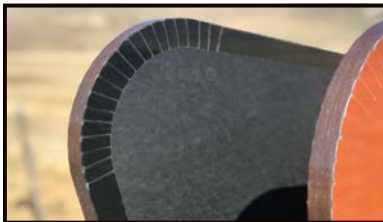

Clear Coat

- Highly recommended for harsh conditions/snow burial areas

Brown Vinyl Backing

- For highly visible areas to reduce glare off the sign back

Edge Tape

- Recommended for snow burial areas

Sliders

- Open & Closed, Seasonal Closures, or Custom Messages
- Security feature/locks available

Z Bar

- Use to stiffen sign and/or allow for alternate mounting options
- Available as raw aluminum or powder coated brown

Digital Graphics

- Add extra detail, color, small USFS shields, or Interagency logos

DIGITAL GRAPHICS

ABOUT DIGITAL GRAPHICS

- Digital graphics allow for a wide variety of images and colors to be used on a sign.
- Many signs we make include the application of a digital graphic for a logo or a detailed map.
- A full color digital graphic is printed and then applied to a backing - typically aluminum or HDO plywood. The digital graphic can also be applied to a thin material such as lexan and then inset into a plastic or wood sign.
- We can print digital graphic stickers for you to apply on-site.
- Digital graphics can be non-reflective or reflective. Clear overlay is applied to each graphic for protection.

ORDERING

- In order to supply you with the highest quality digital graphic available, please provide a high quality file in either of the following formats: .jpg, .eps, .pdf, .tif or a vector format such as an .ai or .eps. If you are not sure of your artwork format, feel free to contact us.
- Please specify any pantone colors if necessary and we will match as close as possible.
- Artwork may be subject to a one time set up fee.
- All digital graphics will be printed on 3M 3290 Reflective Sheeting and receive 3M's 1170 Clear Film unless otherwise noted.

SIGN MATERIALS

Routed

MDO Plywood

- 3/4" thick
- routed
- painted
- 7-10 year average life

White Oak

- 3/4" thick
- routed
- unfinished or scorched
- 15-20 year average life

Western Red Cedar

- 1 1/2" thick
- routed or sandblasted
- unfinished or stained background with painted text
- clear all heart vertical grain
- 15-20 year average life

HDPE Plastic

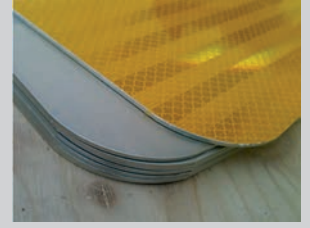

- 3/4" or 1/2" thick
- routed top layer reveals center color
- no paint/no maintenance
- vandal resistant
- contains recycled components
- textured finish
- 20+ year average life

Reflective

HDO Plywood

- 5/8" thick
- sheeted with high intensity prismatic
- black back, painted edges
- 7-10 year average life

Aluminum

- 0.080" or .125" thick
- sheeted with high intensity prismatic
- corrosion and rust resistant
- 7-10 year average life

Aluminum Sheeting/Overlay Options

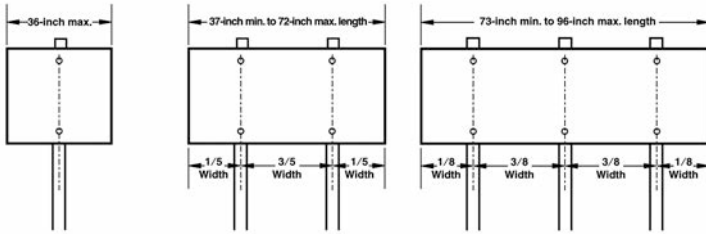

Aluminum signs may be sheeted with one of the following reflective products:

- 3M 3290 Engineer Grade (Less Reflective)
- 3M 3930 High Intensity Prismatic (More Reflective)
- 3M 4090 Diamond Grade (Most Reflective)

Unless noted all signs will be manufactured with HIP sheeting (High Intensity Prismatic) with 3M 1170 ElectroCut Film applied over the top. Upon request 3M 1170 Clear Film will be applied for a clear coat overlay. All digital graphics will be printed on 3M 3290 Reflective Sheeting and receive 3M's 1170 Clear Film unless otherwise noted.

Wood Cross Braces

HDPE Plastic Sign Installation

Expansion and Contraction

Due to fluctuation in weather temperatures the HDPE plastic sign material will expand or contract at a maximum rate of .03" per foot depending on sign color selected. Installation design considerations must be applied in order to compensate for sign material expansion or contraction. This material must have room to move freely.

Oversize All Drilled Holes in HDPE Signs

All holes drilled must be oversized a minimum of 1/8" to 1/4" than the bolt used to prevent the sign from cracking. Use of bolts/fasteners is recommended and they should be loosely fastened to allow movement of expansion or contraction. DO NOT over tighten bolts! The HDPE plastic sign material is very easy to drill. HDPE Plastic signs do not come pre-drilled.

Use Wood Cross Braces

We highly recommend mounting all HDPE plastic signs to wood posts and using 2 or more wood cross braces depending on the size of the sign. The maximum space between the cross braces should be no more than 3 feet. Deck screws may be used to attach the cross braces to the sign, these holes do not have to be oversized. 12" - 18" is recommended for spacing of the deck screws.

Please view our website for further instructions on HDPE Plastic sign installation or call for more information.
